Rules for the Board Game Tsuki (突棋), 20th Edition

2-player zero-sum finite deterministic perfect-information abstract strategy game

1 Setup

(1) The standard board is an 8×8 grid.
Two players sit facing each other across the board.

(2) The nearest row to each player is called that player's back rank.
The farthest row is the opponent's back rank.

(3) There is only one type of piece. Each player has 8 pieces by default.
A player's pieces and the opponent's pieces are distinguished by a property.

(4) Pieces can only be placed within squares, with at most one piece per square.

(5) At the start of the game, each player places one of that player's pieces on each square of that player's back rank.

2 Turn order

(1) "A player makes a move" means
a player moves one of that player's pieces to a different square.

(2) The first player makes the first move,
then players alternate turns after making each move. Passing is prohibited.

3 Movement only

(1) A piece can move any number of empty squares
in one of these directions: ↖ , ↑ ,↗ . ("↑" means forward.)

(2) A piece cannot move to an occupied square, nor jump over another piece.

4 Capturing and movement

(1) A piece can capture an opponent's piece and move to its square
only if that opponent's piece is exactly one square away
in one of these directions: ← , ↖ , ↑ , ↗ , → .

(2) Captured pieces cannot be reused.

5 Winning the game

A player wins if one of the following conditions is satisfied:

(1) The player moves one of that player's pieces to a square of
the opponent's back rank,
and the opponent makes the next move without capturing that piece.

(2) The player makes a capturing move, which is legal,
and it leaves no opponent's pieces on the board.

(3) The opponent resigns.

(4) The opponent makes a move, which is illegal,
and the player does not make the next move and points out the foul.

6 Notation

(1) The first player is represented by "▢", and the second player by "▽".

(2) From the first player's perspective, a square is denoted as "$x.y$",
where the square is x-th from right to left ("$x.$")
and y-th from the far side to the near side ("y").

(3) The direction of movement is indicated by an arrow.

(4) A move made is written in the following order:

- the player who made the move
- the destination square
- the direction of movement

Example: "▢ 2.3↗", "▽ 4.5↓"
